

# Dairying in Kenya: An Assessment of Competitiveness and Profitability

**Stella Wambugu and Lilian Kirimi**

# Introduction

- Kenya has the largest dairy herd in SSA, with estimated 3.5-3.8 million milking cows (MoLD). Dairy contributes 14% of Agr GDP and 3.5% of total GDP
- In Africa, Kenya is the only country, after South Africa, that produces enough milk for both domestic consumption and export
- Sudan is the largest producer of milk in the COMESA, but it does not produce enough to satisfy both domestic and export markets

- In the world, India is the largest milk producer (108 million tons), New Zealand largest exporter (exports about 95% of its milk production, 15 million tons) and Mexico is the world's largest importer (105,000MT)
- Country Production, 2009 (litres)-Sudan (5.32b), Kenya (4.07b), Egypt (3.2b), South Africa (3.09b), (Morocco 1.7b) (FAO Statistics)

## Objectives

- To assess the Kenya's dairy sector through a synopsis of its competitiveness regionally and locally
- Examine milk productivity trends and the variable cost of production at farm level, *vis a vis* the constraints in the dairy industry
- To outline the policy implications in relation to the socio-economic issues in milk production and marketing

- In Africa, Kenya's main competitor in exports is South Africa, which has captured most of the export market
- Why is RSA the competitor?

SOUTH AFRICA	KENYA
<b>Differences</b>	
<ul style="list-style-type: none"> <li>• <b>Capital intensive, highly specialised- fewer producers, managing larger dairy operations</b></li> <li>• <b>Production/cow/day:15.2L-herds average more than 30 litres a day</b></li> <li>• <b>About 89% marketed through formal channels, and almost all the fresh milk sold is pasteurised.</b></li> <li>• <b>Processors estimated at about 300</b></li> <li>• <b>Large number of smaller processors operate regionally or locally and (5 000 to 400 000L/day)</b></li> <li>• <b>Net exporter, net importer of dairy products or in balance</b></li> </ul>	<ul style="list-style-type: none"> <li>• <b>Dominated by SSF (80%)</b></li> <li>• <b>8-10 L/ cow/day</b></li> <li>• <b>About 30% marketed through formal channel</b></li> <li>• <b>27 processors</b></li> <li>• <b>Very few processors export their dairy produce, apart from the large ones</b></li> <li>• <b>Kenya is self sufficient in milk production</b></li> </ul>

## Similarities

- **Seasonality in production**
- **High input costs – cost of fertiliser and feeds**
- **5 larger processors operate nationally & process over 75% of the raw milk in RSA including Nestle, Parmalat & Danone. In Kenya 3 processors command more than 85% of the market**
- **Global competitive pressures – from countries who are subsidised**
- **Volatile markets**

# Data and Methods

- **Data sources**

- ***Panel data (2000-2010)***

- sample - 1245 SSF in 8 agro- regional zones

- ***Cross sectional data (January -June 2010)***

- Sampling – 5 milk producing regions purposively selected - Kericho, Nyeri, Kinangop, Githunguri, Trans Nzoia
- 8 dairy cooperatives-randomly selected from Kericho, Nyeri, Kinangop, and Trans Nzoia . 3 dairy farmers -randomly selected from each =96
- 1 dairy cooperative purposively selected in Githunguri- 10 farmers randomly selected
- Sample - 106 SSF with dairy enterprises
- 7 dairy processors

- **Method - Descriptive statistics and gross margin analysis**

## Panel data sample (2000-2010)

Agro-regional zones	Districts	No. of households
Coastal Lowlands	Kilifi, Kwale	74
Eastern Lowlands	Machakos, Mwingi, Makueni, Kitui, Taita-Taveta	141
Western Lowlands	Kisumu, Siaya	149
Western Transitional	Bungoma (lower elevation), Kakamega (lower elevation)	146
Western Highlands	Vihiga, Kisii	128
Central Highlands	Nyeri, Muranga, Meru	241
High-Potential Maize Zone	Kakamega (upper elevation), Bungoma (upper elevation) Trans Nzoia, Uasin Gishu, Bomet, Nakuru, Narok	332
Marginal Rain Shadow	Laikipia	34
Overall sample		1245

11

### Cross sectional data sample (Jan-June2010)

Milk shed	Number of households
Githunguri	10
Kinangop	22
Trans Nzoia	24
Nyeri	26
Kericho	24
<b>Total</b>	<b>106</b>

# Results

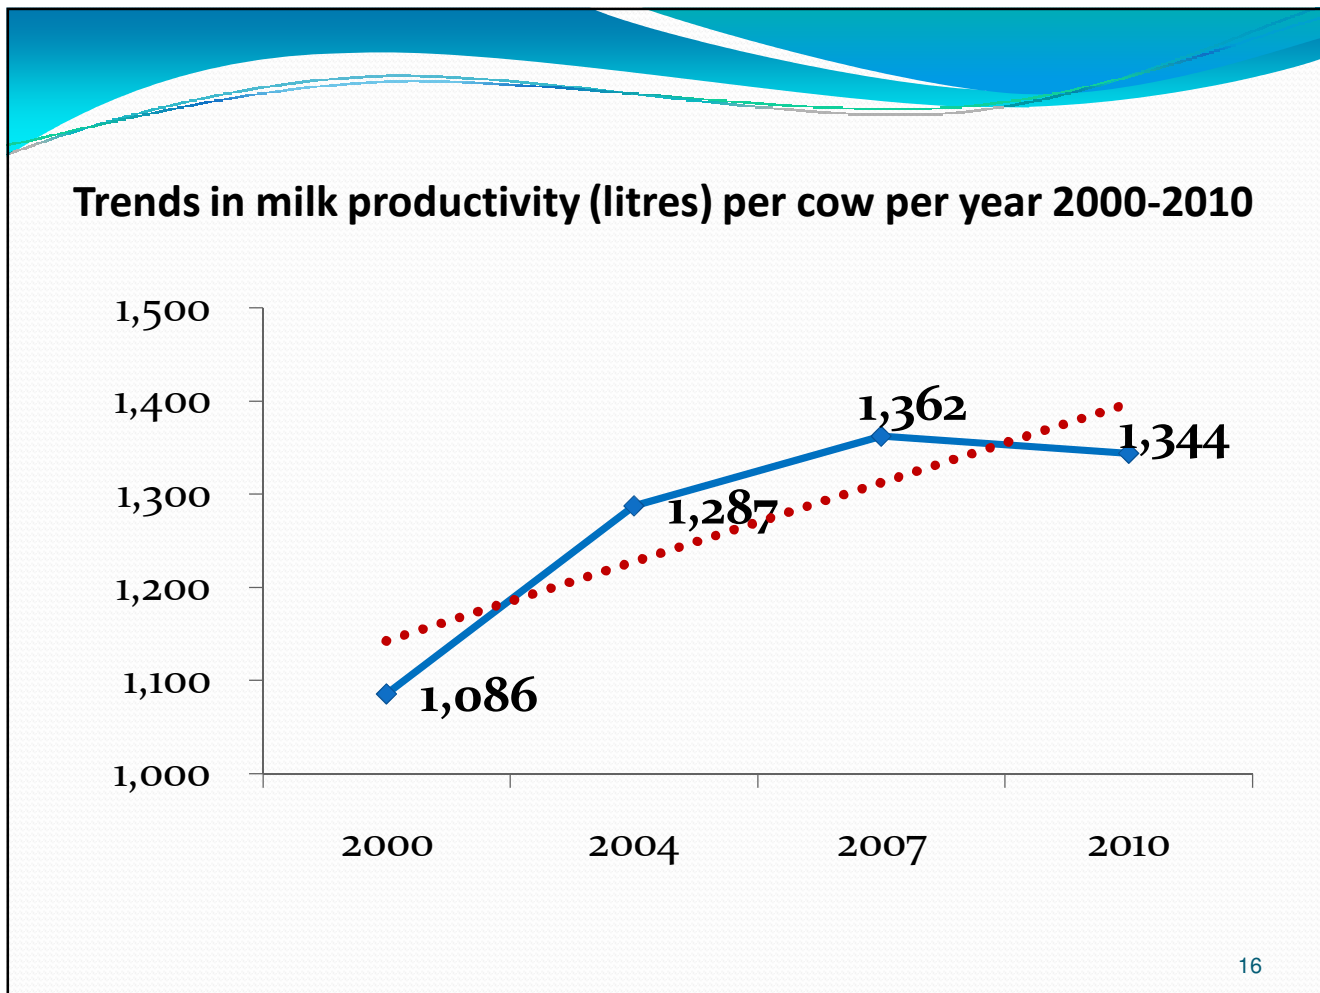

## (panel data analysis)

- Trends in the number of cows in the sample between 2000-2010
- A decline between 2007 and 2010- because of loss of cows during post election violence and drought
- Most of the sample was from **Trans Nzoia, Uasin Gishu, Bomet, Nakuru, Narok-most affected areas by PEV**
- **Over 70% of households in these areas kept improved animals**
- Over 80% of households in Central Highlands kept improved animals
- Local cows – Over 50% of households in Western, Eastern Lowlands, and Western transitional zones

### Total Number of Cows (Improved and local) owned – (2000-2010)

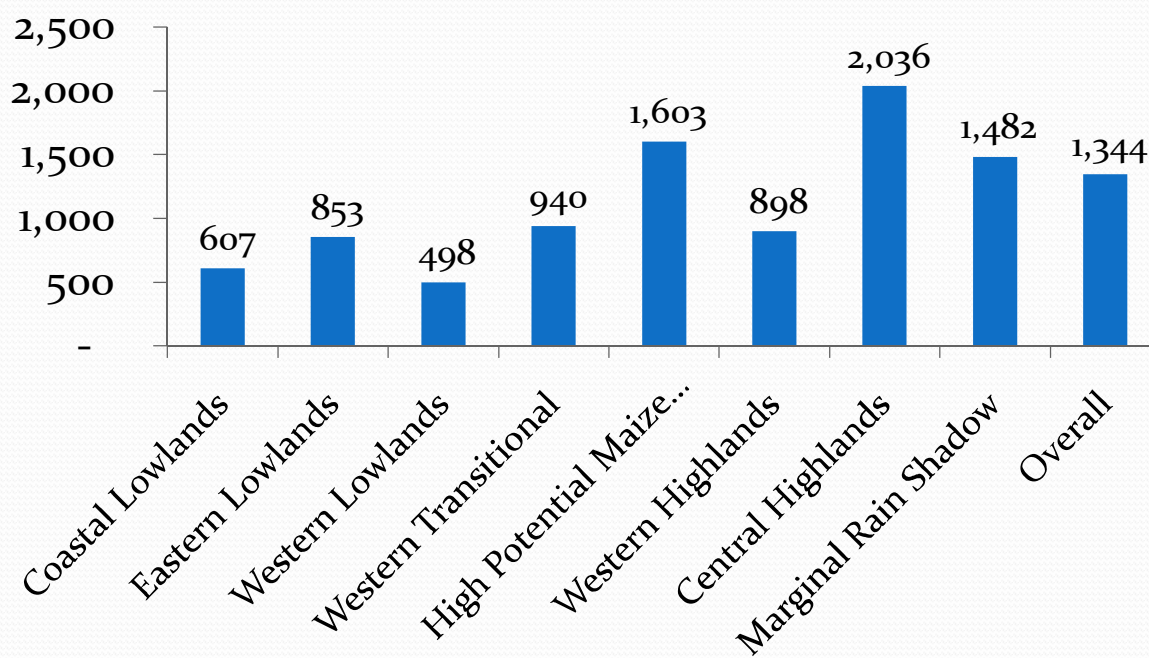

Year

### Milk productivity (litres) per cow by Agro regional zones (2010)

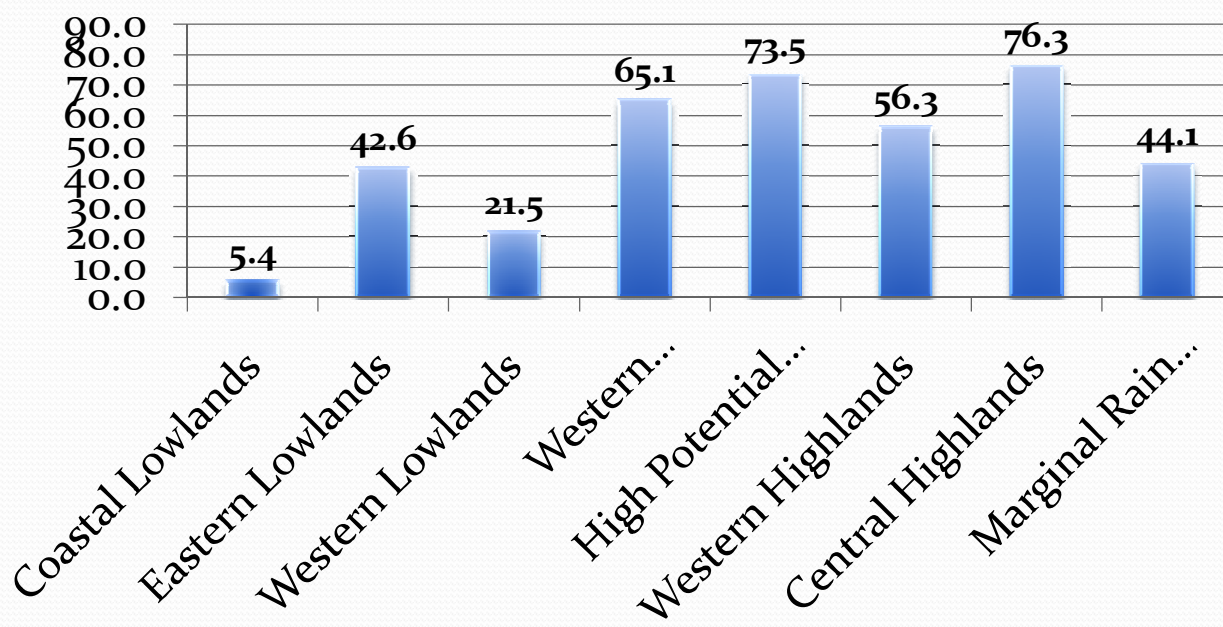

### Mean quantity of milk produced per cow per month between 2009 /2010, by agro regional zones

- Participation in milk markets
  - The proportion of households selling milk increased from 51 percent in 2000 to 57 percent in 2010
  - Central Highlands and High Potential maize zones – over 70% of households sold milk – high productivity in these zones and more improved animals

## Participation in markets-proportion of households that sold milk (2010)

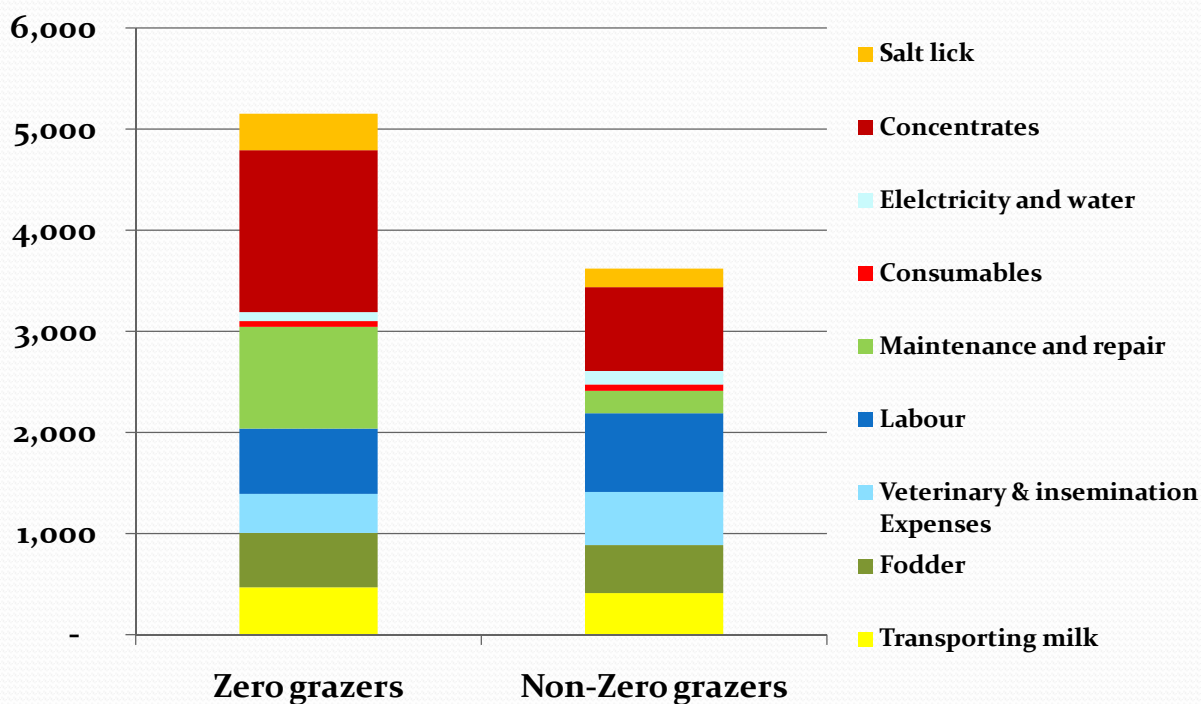

# Gross margin analysis (Cross sectional data)

- Gross margin analysis-total income derived from an enterprise less variable costs
- Revenue – (milk sales + value of milk produced at home)
- Variable costs (milk transport, fodder, concentrates, salt/minerals, veterinary & insemination, labour , maintenance and repair, consumables ,electricity and water)

# Structure of variable costs

## Gross margin analysis by grazing system-sample

	<b>Zero grazing</b>	<b>non-Zero grazing</b>	<b>Sample</b>
<b>Total Revenue</b>	<b>6091</b>	<b>5189</b>	<b>5563</b>
<b>Total Variable Expenses</b>	<b>5,156</b>	<b>3,622</b>	<b>4,301</b>
<b>Gross margin/cow/month</b>	<b>935</b>	<b>1567</b>	<b>1262</b>
<i>Gross margin/variable expenses</i>	<b>0.20</b>	<b>0.40</b>	<b>0.30</b>
<i>Gross margin/concentrates cost</i>	<b>0.58</b>	<b>1.89</b>	<b>1.05</b>
<i>Average milk produced per cow per month</i>	<b>436.2</b>	<b>393</b>	<b>410.9</b>
<i>Variable cost of production per litre of milk</i>	<b>12</b>	<b>9</b>	<b>10</b>
<i>average milk selling price</i>	<b>21.2</b>	<b>20.5</b>	<b>20.8</b>
<i>(price/litre-variable expenses/litre)</i>	<b>9</b>	<b>11</b>	<b>10</b>

## Gross margin analysis for the zero grazing system

	<i>Githunguri</i>	<i>Kinangop</i>	<i>Transzoia</i>	<i>Nyeri</i>
<b>Total Revenue</b>	<b>9377</b>	<b>5539</b>	<b>6458</b>	<b>4551</b>
<b>Total Variable Expenses</b>	<b>3,971</b>	<b>5,107</b>	<b>5479</b>	<b>4927</b>
<b>Gross margin/cow/month</b>	<b>5,406</b>	<b>432</b>	<b>979</b>	<b>-376</b>
<i>GM/variable expenses</i>	1	0.10	0.20	-0.10
<i>GM/concentrates cost</i>	2.8	0.26	1.46	-0.23
<i>Productivity/ cow /month</i>	565	436	476	358
<i>Variable cost of production /litre</i>	7	11.7	11.5	13.7
<i>average milk selling price</i>	26	19.4	22.9	19.5
<i>(price/litre-variable expenses/litre)</i>	19	7.7	<b>11.4</b>	<b>5.8</b>

## Structure of some variable costs

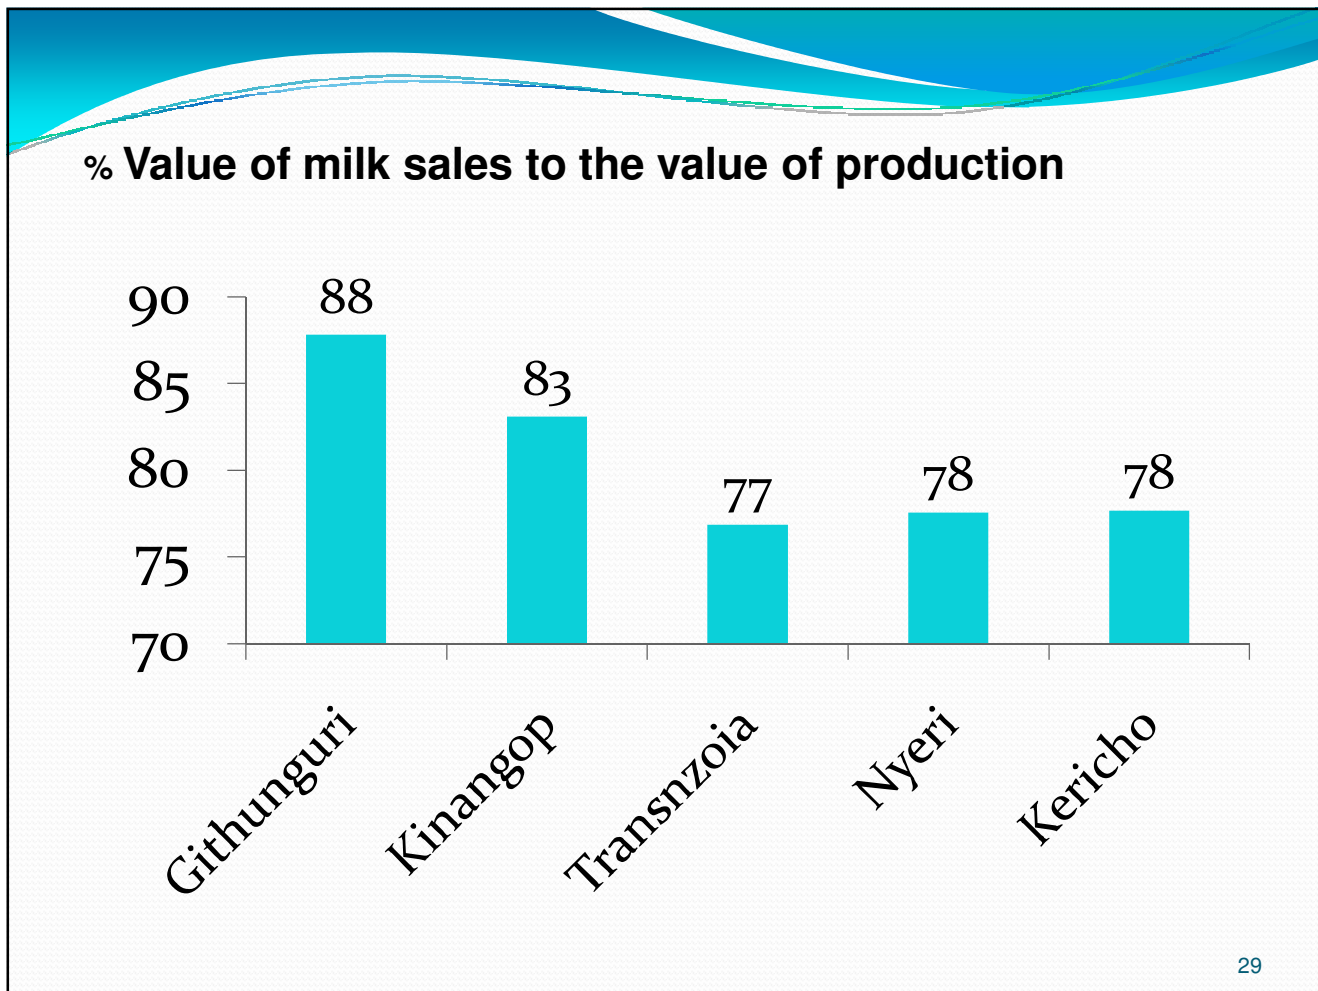

## Gross margin analysis for the non-zero grazing system

	Kinangop	TransNzoia	Nyeri	Kericho
<b>Total Revenue</b>	<b>4741</b>	<b>4449</b>	<b>5505</b>	<b>5888</b>
<b>Total Variable Expenses</b>	<b>3,933</b>	<b>4,072</b>	<b>3711</b>	<b>2,942</b>
<b>Gross margin/cow/month</b>	<b>808</b>	<b>377</b>	<b>1794</b>	<b>2,946</b>
<i>GM/ variable expenses</i>	0.21	0.09	0.5	1
<i>GM/concentrates cost</i>	0.8	0.4	1.7	5.2
<i>Productivity/cow/month</i>	381	317	492	429
<i>Variable cost of production /litre</i>	10.3	12.9	7.5	6.9
<i>average milk selling price</i>	18.2	22.0	17.3	21.7
<b>(price/litre-variable expenses/litre)</b>	<b>7.9</b>	<b>9.2</b>	<b>9.8</b>	<b>14.8</b>

### Average price/litre of milk in different market channels

<b>Sale channel</b>	<b>Githunguri</b>	<b>Kinangop</b>	<b>Transzoia</b>	<b>Nyeri</b>	<b>Kericho</b>	<b>Sample</b>
<b>Insitutions</b>	<b>27</b>		<b>40</b>	<b>25</b>	<b>25</b>	<b>27</b>
<b>large traders</b>	<b>25</b>	<b>18</b>	<b>26</b>		<b>19</b>	<b>24</b>
<b>individual consumers</b>		<b>20</b>	<b>24</b>	<b>23</b>	<b>22</b>	<b>22</b>
<b>Processors</b>	<b>26</b>	<b>21</b>	<b>19</b>	<b>20</b>	<b>21</b>	<b>22</b>
<b>SSMVs</b>		<b>19</b>	<b>21</b>		<b>21</b>	<b>20</b>
<b>Dairy cooperatives</b>		<b>18</b>	<b>22</b>	<b>18</b>	<b>19</b>	<b>19</b>
<b>Sample</b>	<b>26</b>	<b>19</b>	<b>22</b>	<b>19</b>	<b>22</b>	<b>21</b>

28

- Dairying is economically attractive for SSF, though marginally
- Positive trend in milk productivity/ cow /annum (2000-2010)
- However ,various challenges face the industry along the chain
- At processing, the processors interviewed reported the following as the main challenges;
  - Seasonality in production leading to reduced exports and loss of export market to competitors
  - Cost of electricity/ fuel
  - Heavy cost in initial investment
  - Infrastructure bottlenecks
  - Competition from cash based informal market
  - In the past, high-quality standards of global producers have prevented countries like Kenya from competing with major exporters

## Other challenges in the dairy industry...

- Liberalization in 1992- emergence of informal milk trade and private processors
- Informal sector – about 70% of raw milk. Important due to traditional preferences for fresh raw milk
- but with several challenges relating to quality control and standards, and the associated health and safety concerns

- In production - feed quality & cost; poor access to breeding, animal health and credit services; cost of AI and inefficient distribution mechanism, poor interaction and priority setting between research, extension and training
- In marketing - poor infrastructure (roads, electricity-leading to spoilage), inadequate milk collection & marketing system, high transport cost

# Policy Implications

- An important policy implication is that the smallholder dairy system is profitable under current conditions, which is the likely driving force behind its success in Kenya
- Dairy sector is thus an important area for public and donor investment for income and employment generation
- However, some specific policy themes could have a major positive impact on smallholder dairying cost structure and profitability in future

- Strategic milk reserve
  - to stabilize milk production shortfalls in the dry season
- Invest in processing of long life dairy products
  - Absorb excess production
  - Expand to non traditional markets
- Investment in infrastructure
- Speedy implementation of the national livestock feed policy- to guide and promote on farm feed preservation

Thank you
